SUPPLY
230V/400Volts

Every year, we trust hundreds of customers buying BAPRO machines. This is sufficient proof that BAPRO machines are valued for the highest quality. The satisfaction and confidence of our customers to the brand and award appropriate for us BAPRO further motivation to work! We are proud of our products that contribute to the development of so many construction companies. Join the Group of our customers.

Innovation! It's the first word that should come to associate brand BAPRO.

As a leading Polish manufacturer of specialist construction machinery for finishing work we take care of the highest level of equipment produced by us. A number of innovative design solutions applied on a global scale. Our products are characterized by high quality, solid execution, an interesting design in combination with attractive price! We are a modern company with many years of experience. Over the years consistently build a solid brand from good quality Made In Poland! Well qualified staff provides the highest level of service. Our goal is to produce plaster machines for customers requiring and appreciating the quality and stability of employment. By constructing a machine we care about the highest level components to guarantee their reliability. Trust us and our customers motivates us to continue to work effectively. We are prepared for the needs of the market and the needs of our customers.

These are our arguments for you, why you should buy only BAPRO plastering machine. A frequent problem before buying a machine is a choice. On the market there are many differing machines. Therefore, you should do a comparison of a number of factors, and then find the answer to the question posed earlier. We have some advice, here they are.

Price. This is the first criterion that is usually taken into account. Nothing could be further from the truth. It is worth checking whether the price relates to the quality and covers all elements, such as equipment and technical package - service. This is an important point but not the most important.

Application. It is worth before buying ask yourself, what machine are you looking for and for what work? Check its technical capabilities.

Equipment. You should make sure that you are buying a complete machine and equipped with the necessary instrumentation. Only high-quality components guarantee a safe and smooth operation. No many important additions makes the machine incomplete, thus exposing the buyer to further unforeseen costs.

Operating costs: This is a point, that is often forgotten when choosing a machine, but you should remembering.

B A P R O company have a double variable operating system. Mixing of dry mix and wet mix in same machine.

ADVANTAGES !

- universal power supply 230 Volts
- required fuse B20
- variable speed control by the inverter
- variable pump rate
- ease of use and simple design
- high performance
- 5 year warranty
- wide range of applications
- operational reliability
- long distance administration
- convenient transport
- low height of the hopper
- extensive hopper 130 liters
- compressor oil-free HANDY K2
- water and air fittings distributive includes a module of stainless steel
- reinforced geared motors NORD
- the opportunity to work with such devices Pneumatic feeder mortar BAPRO 100/140
- high-quality components

Technical data

- **Pumping : variable controlled by the inverter from 4 to 40 liter per minute**
- **Distance delivery : to 50 meter**
- **Power supply: 230 Volts / 50 Hz**
- **Drives : 2 three-phase motors 400V/ 50 Hz**
- **Gearmotor 5,5 kW 286 rpm controlled inverter speed control**
- **Gearmotor 0,55 kW 22 rpm**
- **Compressor 1040 W efficiency 250 l / min**
- **Dimensions L/W/H:1250/720/1530 mm**
- **Filing height : 90cm**
- **Weight 260 kg**

RECOMMENDED

Gypsum plasters

Gypsum liment plaster

Cement - lime plaster

Lining plasters (renderings)

Light plasters

Restoration plaster / renovating

Decorative plasters

Anhydrite floor screeds

Self levelling floor screed

Spray plaster / Finish coat plaster

Traditional cement - lime plasters with sand

Door frame grouting mortar

Bonding mortar

Spray plaster

Special refractory masses

Levelling plaster

Why BAPRO one 230 Volt ? The difference is in the detail.

Water block

made of stainless steel. Dual **water filtration system** through the use of filters, cleaning protects the components. No damage to the fittings and switches since they are protected.

Electrical control box: dust protection and excellent ease of maintenance. The best industrial automation system includes LEDs, enhanced aesthetics contactors and provides trouble-free control of the whole machine (high standard of work)

Water pump type 50M ensures the continuity of work to stabilize the water pressure to provide the best consistency of the mortar.

High-performance **compressor type HANDY K2** gives optimum spray material. Is maintenance-free and does not contain oil.

A tube frame withstands large loads easily and safe transport thanks to four holders and the reliable folding mechanism.

Very good equipment and high quality (aesthetics) provides safety and convenience continuous work.

Maximum stability due to the robust frame structure. Three Elemental reinforced structure gives great freedom of maneuver in the plumb or level and easy to transport. We offer system of four wheels rotatable about 360 degrees to facilitate the movement
